Contact: Dr. rer. nat. Lars Kattner

2. Core Competences

Endotherm Life Science Molecules (www.endotherm-lsm.de) serves as a Contract Research Organisation (CRO), providing medicinally relevant compounds for drug discovery and the early phases of drug development.

The company holds a fully equipped state-of-the-art laboratory in the Science Park on the campus of the Universität des Saarlandes in Saarbrücken/Germany. The team of Endotherm consists of 12 highly skilled chemists and technicians, trained in medicinal and synthetic organic chemistry. Endotherm is mainly involved with hit-finding, hit-to-lead and lead optimization studies. Unique compound collections of small molecule libraries in wide diversity have been accumulated in recent years. The company has appropriate scientific personnel, tools and equipment (including automation technology) available for rational drug design, for the synthesis of new molecules, for biochemical evaluation of compounds (*in silico* ADMET-characterisation of compounds), and has access to a wide range of analytical instrumentation.

Additionally, the company is involved with its own original drug discovery programs within various collaborations (antibiotics, cardiovascular diseases), partly funded by the EU commission and the federal BMWi.

3. Cooperations offered and requested

With the aim to proceed with its original drug discovery programmes, the company is interested in finding partners providing equity capital in the range of up to 1 Mio €.
